Flock Safety is one vendor of Automatic License Plate Readers, or ALPRs, used by police to capture, categorize, and store identifying information about passing vehicles **AND** humans. This searchable, nationwide database can be accessed without a warrant. *Designed* for mass unvetted access. Other vendors used locally are Axon and Motorola (formerly Vigilant), but there are others like Genetec and Leonardo.

Our fight is against **ALL ALPRs**.

These systems have been misused nationwide by police stalking ex partners, following citizens crossing state lines, and are frequently incorrect. Roseville PD has found their cameras to be **incorrect** 71% of time.

The Sacramento Grand Jury found Sacramento County Sheriff in violation of state law regarding sharing data out of state in a 2024 report. SSO has denied all accountability in their response.
